在已经出版的2011-2020年道路安全行动十年全球计划的主要目标中，在2020年前降低全球范围内的道路交通事故致死率已经成为重中之重。在该行动计划中已经明确了一各国行动战略中应包含对道路安全管理理念的支持和推广。而这些管理标准中就包括了道路安全管理体系(RTS)—要求及使用指南这一国际标准。

ISO 39001 CERTIFICATION

ROAD SAFETY MANAGEMENT SYSTEMS CERTIFICATION

Road traffic injuries and deaths are in most cases preventable. Let's work together to do our part in making our roads safer.

According to the World Health Organisation, by 2030 injuries from road incidents will be the fifth leading cause of death in the world. ISO 39001 creates a systematic process approach for organizations who aim to create safer roads, reducing and ultimately eliminating road traffic incidences. Through certification to ISO 39001, organizations and their leadership can show their commitment to improving road safety and saving lives.

Create safer roads

The ISO 39001:2012 standard outlines the requirements for a Road Traffic Safety management system (RTS). This standard is an effective tool for governments, automotive manufacturers and organisations worldwide to take measures in reducing death and serious injuries caused by road accidents. Requirements of ISO 39001 cover all aspects of automotive safety from speed to vehicle condition and driver awareness.

We all have a role to play in preventing road incidents, ISO 39001 is the first step for organizations to implementing processes that meet this goal. Certification to the ISO 39001:2012 standard will help your organisation implement your company's road safety management system objectives and action plans within your operations. Intertek can provide the resources and services

necessary to reduce insurance and operational costs, as well as strengthen public safety by minimizing traffic accidents.

The ISO 39001 standard was designed with your management system in mind, and is fully integrable with other ISO standards including ISO 9001 and ISO 14001.
